Blades Groundwater – CIC Miles (4-5557); SAM O'Loughlin

- The Site team is preparing for the Blades Groundwater Site to be proposed to the National Priorities List (NPL) tentatively on October 24. OLEM is still conducting its review and the Region is awaiting the final listing package. Three public wells and 7 private wells are contaminated with PFAS. The public wells have carbon treatment systems and the private wells have filter treatment systems on the faucets. Outreach materials such as a postcard and factsheet are being prepared and a public meeting is being planned for mid-November.
- **CIC Perspective:** The CIC continues to work with DNREC to develop messages and outreach materials. Due to DNREC's thorough response when the PFAS contamination discovered and the treatment systems in place, the site team expects most residents to be supportive of the listing.
